June 12, 2026

Dear [COMPANY] Hiring Team,

I am applying for the [ROLE TITLE] position. [ONE SENTENCE: the specific product, system, or problem at [COMPANY] you want to work on, and why your background fits it. Delete this bracket text.]

I build production systems end to end and run them afterward. Through my studio, SKomp Studio, I designed, shipped, and now operate a multi-tenant booking-and-payments platform for a paying client: \$40K+ CAD processed, 500+ registered users, and a codebase held to 1,600+ automated tests with idempotent payment processing and webhook signature verification, because money-handling code has to be boring and correct. Separately, I built and operate a self-hosted multi-agent platform that runs 30+ scheduled automations: email-triggered workers that turn real document packages into ready-to-file output in minutes, each one sandboxed in a kernel-namespaces jail behind fail-closed gates, with an autonomous overnight pipeline that builds and tests projects behind a 12-check publish gate. It is the most honest education available in what agentic systems actually require: permission boundaries, cost ceilings, and verification loops, not demos.

My day job sharpens the same instincts from the business side. As an Associate Account Manager at Mitsubishi HC Capital Canada, I carry an equipment-finance sales book, and I have shipped internal software the desk uses daily: a quoting engine that replaced 13 abandoned Excel calculators and matches TValue, the industry lease-math standard, to the penny under 72 automated tests, and an AI document-validation service that went through the company's first internal innovation review and now audits deal packages unattended. I am finishing an MEng in Computing & Software at McMaster, where my research applies formal methods to LLM citation faithfulness.

Everything above is inspectable: the platform is live, the site at suleyman.io documents the architecture, and I am happy to walk through any of it in depth. I would welcome the chance to bring this mix of shipped systems and production judgment to [COMPANY].

Sincerely,

Suleyman Kiani
