

Suleyman Kiani

Applied AI Engineer · Agentic Systems, Backend & Formal Verification

Burlington, ON | +1 (289) 788-8260 | suley.kiani@outlook.com | linkedin.com/in/suleyman-kiani | github.com/kianis4 | suleyman.io

SUMMARY

Applied AI engineer who ships agents with their evals attached. A year inside a regulated lender taking systems from discovery through IT intake and security review to corporate handoff, plus a founder's payments platform a real business runs on. MEng at McMaster, where my project formally verifies that an LLM pipeline cannot release an uncited claim.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, SQL, Swift, C

AI & Agents: LLM APIs, agent orchestration, LangGraph, structured outputs, RAG, evals, LLM-as-judge

Backend & Cloud: Microservices, Redis Streams, FastAPI, Node.js, Prisma, PostgreSQL, AWS Lambda, Docker, Linux

Testing & Formal Methods: TDD, pytest, Vitest, Playwright, mutation testing, TLA+ model checking, Z3/SMT2

EXPERIENCE

Applied AI Engineer

Starting Oct. 2026

LaunchGood

Remote

- Senior (P3) hire into the pod that owns AI initiatives: production agents, each gated by **evaluation suites in CI**.

Associate Account Manager (Software Engineering scope)

Sept. 2025 – Oct. 2026

Mitsubishi HC Capital Canada

Burlington, ON

- Built one bilingual **TypeScript** application to replace **13 Excel pricing calculators** across 14 manufacturers and 9 pricing engines; rate configs are versioned **Postgres** rows with an audit log, so repricing never needs a deploy.
- Carried it through a nine-document security-scoped IT intake, leadership review and IT pre-review, then handed source, spec and **16 written rulings** to corporate IT, which now owns and is deploying it.
- Validated its finance core against the booking system of record, reproducing **45 funded deals** to within half a cent, behind a **1,370-test** suite with mutation-tested assertions that caught **7 of 9 engines** quoting wrong terms.
- Co-designed with two colleagues a collections scorecard whose five bands separate default probability **0.647 to 0.017** on the scored live book; SVP-announced, it ranks 1,023 contracts (**\$66.4M**) into managers' **daily list**.
- Built an **AI document-validation service**: LLM extraction checked against a rules checklist behind a deterministic retry state machine, returning **READY / NOT READY** at a **median 4.9 minutes** over 56 runs.

Software Engineer & Founder

Jan. 2024 – Present

SKomp Studio

Remote

- Built **Incite**, a white-label multi-tenant booking-and-payments platform on a **74-model Prisma schema** and **196 REST API routes**, gated by **6,000+ automated tests** on every merge.
- Its flagship tenant runs its entire operation on it: **\$45K+ CAD** processed across 640 users and 1,380 bookings.
- Money is the part that cannot be wrong: **idempotent payments**, webhook signature verification and **tenant isolation** enforced in a tenant-scoped data-access layer, guarded by a build-failing test for unscoped models.

EDUCATION

McMaster University

Hamilton, ON

MEng, Computing & Software (Distributed Systems, Formal Methods & Applied ML)

Sept. 2025 – 2027 (expected)

- **Mac Study Companion**, judged complete by co-supervisors Dr. Richard Paige and Dr. William Farmer in Sept. 2026: a Z3/SMT gate refuses any study-note claim that does not cite its exact source, model-checked in TLA+.
- On a 10-lecture corpus the gate took citation precision from 0.604 to **0.960**; delivered as **9 hexagonal microservices** over Redis Streams. **A+** in Simple Type Theory, **A** in Microservice Architectures.

BASc (Honours), Computer Science

Sept. 2018 – Nov. 2024

PROJECTS

Zakat-Eligibility Triage · evaluated LLM triage prototype | *Python, structured outputs, LLM-as-judge*

2026

- Triage agent for crowdfunding campaigns, scored on 18 hand-labelled cases by a label-blind LLM judge with a human call on each: **97.2%** category and **83.3%** escalation agreement, clearing 80% and 75% gates.

Personal Agentic OS · distributed automation platform | *Python, TypeScript, Docker, Linux, systemd*

2026

- Self-hosted platform of **60+ scheduled services** and event-triggered workers; those taking untrusted input run in kernel-namespaces behind a fail-closed egress allowlist.
