SUMMARY

Software engineer who builds the financial tooling a finance desk actually runs on. Shipped a production quoting engine that replaces 13 manufacturer Excel calculators and matches the industry-standard lease-math engine (**TValue**) to the penny, a multi-tenant booking-and-payments SaaS on **Square** serving live studio operators, and a self-hosted multi-agent system that automates real funding-deal document workflows. An equipment-finance background at Mitsubishi HC Capital gives me domain fluency most engineers don't have. Finishing an MEng in Computing & Software at McMaster.

EXPERIENCE

Associate Account Manager, Equipment Finance
Mitsubishi HC Capital Canada

Sept. 2025 – Present
Burlington, ON

- Replaced **13 abandoned Excel calculators** (30–45 sheets each) with one **Next.js / React** web app spanning all 11 product lines, reverse-engineering each manufacturer's lease and subsidy math to hit **exact penny-parity with TValue** on every test deal; backed by **72 automated tests**.
- Reverse-engineered three structurally different subsidy formulas and proved three regional dealer workbooks were re-skins of one template, collapsing them into shared calculation engines; authored a **platform-independent architecture and handoff doc** so the company's IT team can rebuild the tool on any stack.
- Built a working **AI document-validation prototype** (OCR + ML + rules) for deal-funding review and made the technical case that **carried it through the company's first internal innovation review**; it now runs as a live email service that audits real deal packages unattended.
- Designed and am implementing a **predictive collections scorecard** with the credit and portfolio teams: a dual-track model that auto-triages low-risk accounts and scores the rest by recovery priority across about **\$17–18M of assets in recovery**, where **each 1% of recovery improvement is worth about \$1M** to the bottom line; owned the business case, won approval to proceed, and am driving the phased rollout.
- Automated the desk's most repetitive document work (power-of-attorney, asset-registration, and pre-funding packages) into **email-triggered services that reply within minutes** with complete, ready-to-file documents.
- Carry an equipment-finance sales book, funding **200% of new-business target (\$4M against \$2M)**.

Junior Web Developer
Giftcash Inc.

May 2021 – Jun. 2022
Remote

- Migrated a legacy **Python / Django monolith to a Node.js AWS Lambda** serverless architecture, moving to per-request billing and removing always-on server overhead.
- Tuned **PostgreSQL** performance with targeted indexing, caching, and query rewrites on the hottest read paths, eliminating the sequential scans behind the gift-card lookup flow.
- Automated **gift-card balance verification** across providers with a **Puppeteer + Axios** pipeline, replacing manual per-card checks.
- Stood up **Jenkins and GitHub Actions CI/CD** so merges deployed without manual release steps.

PROJECTS

Mike Ross AI · agentic legal RAG (Delta Hacks 12) | *LangGraph, Gemini 2.0, MongoDB Atlas, FastAPI, Next.js* 2026

- Built an **agentic legal assistant** that answers Canadian-law questions with section-level citations: a **LangGraph state machine** routes intent, runs hybrid keyword + vector retrieval over **16,000+ legal documents** (MongoDB Atlas, HNSW indexing), and returns schema-validated output to block hallucination.
- Wired a **Gemini 2.0 Flash** reasoning core to a FastAPI backend streaming over SSE into a Next.js 16 frontend; deployed live at mike-ross.ca.

Personal Agentic OS · multi-agent automation platform | *Python, TypeScript, Claude, systemd, Tailscale*

2026

- Built and run a **self-hosted multi-agent system** on an always-on Linux server: a **Claude orchestrator** dispatches scheduled workers for email-triggered document validation, document generation, and daily research; autonomous overnight runs are bounded by a **cost circuit-breaker, sub-agent caps, and idle-paced cycle floors** so spend and side effects stay capped and reversible.
- Built the supporting infrastructure: a synced, queryable knowledge base the agents use as **long-term memory**, a **Next.js dashboard served over a private Tailscale mesh**, and a service-account auth layer reused across every Gmail and Drive automation.

Solstice Pilates · multi-tenant booking & payments SaaS | *Next.js, Prisma, Neon, Square* 2025 – Present

- Sole engineer on a **live multi-tenant booking and payments platform** running real studio operations, backed by **about 5,000 passing tests** and an in-app issue reporter feeding operator feedback straight to the backlog.
- Found and fixed **money-losing production payment bugs**: a double cents conversion saving a **\$50 discount as \$5,000**, a 4x undercount in conversion reporting, and tax under-reported on subscription renewals.
- Ran a **parallel agent-orchestrated release** · five production fixes in one session across isolated git worktrees, each with its own test-and-verify loop, merged through branch-protected PRs.

MEng Research · LLM study companion | *retrieval, local model serving* 2026

- Graduate research with **Dr. Farmer and Dr. Paige**: an **LLM-based study companion** that pairs retrieval over course material with locally served models, for grounded, low-cost answers that keep student data off third-party APIs.

Local RAG + Voice-Note Router · applied ML / infra | *Ollama, qwen2.5, Whisper, RTX 3080* 2026

- Stood up a **fully local RAG stack** (qwen2.5 on an RTX 3080) over a private knowledge base, returning **cited answers in about 4s at zero API cost**.
- Built a **Whisper voice-note router** that transcribes on-device and files each note to the right project, with an automated eval harness that tunes the reranker against Recall@10.

OverloadPT · iOS strength-training app | *Swift, SwiftUI, SwiftData, Combine* 2025

- Built and shipped an iOS app in **Swift / SwiftUI** (MVVM + Coordinator) with a **progressive-overload engine** that recommends weight increases and flags plateaus from a lifter's training history.
- Modeled workout data with **SwiftData** and reactive **Combine** pipelines for real-time logging and progress visualization.

TECHNICAL SKILLS

Languages: TypeScript, Python, SQL, Java, C, Swift

Financial & Domain: Equipment & lease finance, amortization math (PMT / PV / FV / RATE / IRR, TValue-validated), manufacturer subsidy & blended-rate modeling, credit-scorecard & recovery modeling, deal-funding workflows

Backend & Web: Next.js (App Router, Server Actions), React, Node.js, FastAPI, Prisma, Tailwind, PostgreSQL (Neon), Redis, Vercel, REST APIs

AI / Agentic: Multi-agent orchestration, local LLM serving (Ollama, qwen2.5), RAG + reranking, Whisper transcription, prompt & cost guardrails

Payments & Integrations: Square (orders, payments, webhooks), Stripe, Meta CAPI, Google Ads server-side conversions, Gmail / Workspace API

Practices: TDD (Vitest, Playwright), CI/CD, branch-protected PRs, systemd automation, multi-tenant SaaS

EDUCATION

McMaster University Hamilton, ON

MEng, Computing & Software

Sept. 2025 – Expected Dec. 2026

- Coursework: **A+ in Simple Type Theory and Microservices-Oriented Architectures.**

McMaster University

BASc (Honours), Computer Science

Hamilton, ON

Sept. 2018 – Nov. 2024
