

Suleyman Kiani

SOFTWARE ENGINEER · EQUIPMENT FINANCE · FINTECH / FINANCE PLATFORMS

+1 (289) 788-8260 | KIANIS4@MCMaster.CA | [LINKEDIN.COM/IN/SULEYMAN-KIANI](https://www.linkedin.com/in/suleyman-kiani) | [GITHUB.COM/KIANIS4](https://github.com/KIANIS4) | [SULEYMAN.IO](https://suleyman.io)

SUMMARY

Software engineer who ships production systems end to end: a multi-tenant SaaS billing live customers on **Square**, an event-driven **.NET** microservices pipeline, and an ML autodiff engine built from scratch. I bring an underwriter's instinct for correctness from the equipment-finance desk, where I currently fund **200% of monthly quota** at Mitsubishi HC Capital while spreading financials, structuring leases, and modeling credit risk. Completing an MEng in Computing & Software (A+ in type theory and microservices). Targeting fintech and finance-platform engineering.

EDUCATION

McMaster University <i>Master of Engineering (MEng), Computing and Software</i>	Hamilton, ON Sept. 2025 - Dec. 2026 (expected)
Year 1 complete with A+ in Simple Type Theory and Microservices-Oriented Architectures; coursework in distributed architecture and group theory for optimization and machine learning.	
McMaster University <i>Bachelor of Applied Science (BASc), Computer Science</i>	Hamilton, ON Sept. 2018 - Nov. 2024

EXPERIENCE

Associate Account Manager, Equipment Finance <i>Mitsubishi HC Capital Canada</i>	Sept. 2025 - Present Burlington, ON
- Designed and shipped internal automation replacing fragile manual Excel and credit workflows, including a TypeScript web quoting application that consolidated 13 manufacturer-specific pricing models into one validated tool used on live deals, eliminating a class of manual rate-calculation errors. - Built document-validation automation for funding packages that checks completeness and flags exceptions before submission, removing a manual review step from the deal flow. - Contributed Python modeling to a cross-functional predictive default-risk model and built Power BI portfolio and variance analyses supporting credit and collections decisions. - Underwrite and structure equipment leases and loans (FMV, capital, and vendor-finance structures) across construction, transportation, and material-handling; spread customer financial statements and compute coverage, net-investment, and residual metrics for credit decisions. - Own the end-to-end lease-transfer desk and funded \$4M against a \$2M monthly target (200% of quota) in April and May 2026, exceeding funding quota every month since my second month in the role.	
Junior Web Developer <i>Giftcash Inc.</i>	May 2021 - Aug. 2022 Remote
- Migrated a legacy Python/Django monolith to a Node.js AWS Lambda serverless architecture, improving scalability under bursty load. - Tuned PostgreSQL through indexing, caching, and query rewrites; p95 on the balance-verification endpoint dropped from ~340ms to ~210ms. - Automated balance-verification workflows with Puppeteer and Axios, replacing a recurring multi-hour manual reconciliation with an unattended job finishing in under 15 minutes. - Established Jenkins and GitHub Actions CI/CD pipelines, replacing a manual multi-step release with a one-click deploy.	

PROJECTS

Skomp Studio – multi-tenant studio SaaS <i>Next.js, React, Prisma/Neon, Square, AWS</i>	2025 - Present
- Architected and shipped a multi-tenant TypeScript platform on a hexagonal ports/adapters design with row-level tenant isolation, serving a live paying studio. - Processed live Square payments and billing with idempotent handling and reconciliation against studio records; ~800 unit tests and Sentry observability gate releases, with zero cross-tenant leaks or billing incidents since launch.	
DealFlow Sandbox – event-driven microservices <i>.NET, RabbitMQ, PostgreSQL, Docker</i>	2025
Modeled an equipment-finance pipeline as decoupled .NET microservices communicating over RabbitMQ/MassTransit, with Entity Framework Core and Docker Compose.	

- Replaced a 15–20 minute manual party-exposure lookup with a sub-second API returning total exposure, delinquency, and document requirements in one call.

Applify AI – AI résumé-tailoring SaaS | *Next.js, PostgreSQL, Stripe, LLM APIs* 2025 - Present

- Built and grew an AI résumé-tailoring product to **~150 paying users**, generating ATS-optimized, job-targeted résumés from any job description.
- Relaunched on a clean-architecture **PostgreSQL** backend with **Stripe** subscriptions and authenticated, per-user data isolation.

Micrograd Engine – from-scratch autodiff | *Python, Jupyter* 2025

- Implemented a from-scratch automatic-differentiation engine (**Value**, **Neuron**, **Layer**, **MLP**) with backpropagation to ground ML fundamentals.

Personal Agentic OS – multi-agent automation | *Claude API, Python, FastAPI, RAG* 2026

- Self-hosted multi-agent ops system that auto-validates emailed funding-document packages and replies on-thread in ~4 minutes, with an orchestrator/worker model and deterministic, fail-closed publish gates.

SKompXcel – mentorship platform (founded) | *Next.js, Python, GCP* 2024 - Present

- Founded and built a mentorship platform where **100+ learners** drill algorithms, system design, and mock interviews, deployed on a serverless **GCP** stack.

TECHNICAL SKILLS

Languages: TypeScript, Python, SQL, C/C++, Java, Swift, JavaScript, Bash

Frameworks & Runtimes: Next.js, React, Node.js, FastAPI, Express, .NET / ASP.NET Core, Prisma, React Native / Expo, PyTorch

Data & Infrastructure: PostgreSQL (Neon), MongoDB, DynamoDB, AWS (Lambda, SES/SNS, S3), GCP, Vercel, Docker, RabbitMQ

AI & Tooling: Claude API / Claude Code, agentic orchestration, RAG & vector search, MCP, Git, GitHub Actions, Vitest, Playwright

Finance: Credit analysis, financial-statement spreading, DSCR & net-investment, lease/loan structuring (FMV, capital, vendor finance), amortization modeling, Power BI
