SUMMARY

Equipment-finance professional and full-stack/ML engineer who operates fluently in both worlds. I underwrite and structure multi-million-dollar equipment leases — spreading financials, running credit analysis, and modeling deals — while shipping production software: multi-tenant SaaS with real paying customers, AI products, and internal finance automation. Currently funding **200% of monthly quota** at Mitsubishi HC Capital and completing an MEng in Computing & Software (A+ in type theory and microservices). Targeting roles at the intersection of finance and engineering — fintech, quant-dev, and finance-platform teams.

EDUCATION

McMaster University <i>Master of Engineering (MEng), Computing and Software</i>	Hamilton, ON Sept. 2025 - Dec. 2026 (expected)
- Year 1 complete with A+ in Simple Type Theory and Microservices-Oriented Architectures. - Coursework spanning type theory, distributed/microservice architecture, and group theory for optimization and machine learning.	
McMaster University <i>Bachelor of Applied Science (BASc), Computer Science</i>	Hamilton, ON Sept. 2018 - Nov. 2024

EXPERIENCE

Associate Account Manager, Equipment Finance <i>Mitsubishi HC Capital Canada</i>	Sept. 2025 - Present Burlington, ON
- Funded \$4M against a \$2M monthly target (200% of quota) in both April and May FY26, and have exceeded funding quota every month since my second month in the role. - Underwrite and structure equipment leases and loans (FMV, capital, and vendor-finance structures) across construction, transportation, and material-handling; spread customer financial statements and compute coverage, net-investment, and residual metrics for credit decisions. - Designed and shipped internal automation that replaced fragile manual Excel and credit workflows — including a web quoting application that consolidated 13 manufacturer-specific calculators into one validated tool, and document-validation automation for funding packages — reducing per-task turnaround from minutes to seconds. - Took sole ownership of the end-to-end lease-transfer desk, enabling the account-management team to post some of its strongest funding numbers. - Contributed to a cross-functional Python predictive default-risk model and built Power BI portfolio and variance analyses supporting credit and collections decisions.	
Junior Web Developer <i>Giftcash Inc.</i>	May 2021 - Aug. 2022 Remote
- Migrated a legacy Python/Django monolith to a Node.js AWS Lambda serverless architecture, improving scalability and reducing infrastructure costs by 20%. - Optimized PostgreSQL performance through indexing, caching, and query tuning, cutting response times by 20%. - Automated balance-verification workflows with Puppeteer and Axios, increasing operational efficiency by 25%. - Established Jenkins and GitHub Actions CI/CD pipelines, reducing deployment times by 30%.	

PROJECTS

Skomp Studio — multi-tenant studio SaaS <i>Next.js, React, Prisma/Neon, Square, AWS</i>	2025 - Present
- Architected and shipped a ~100K-line multi-tenant TypeScript platform (122 API routes, 38 data models, hexagonal ports/adapters design, row-level tenant isolation) serving a live paying studio. - Integrated Square for payments and billing and built serverless notifications on AWS SES/SNS/AppSync, with Sentry observability and ~800 unit tests gating releases.	
Applify AI — AI résumé-tailoring SaaS <i>Next.js, PostgreSQL, Stripe, LLM APIs</i>	2025 - Present
- Built and grew an AI résumé-tailoring product to ~150 paying users, generating ATS-optimized, job-targeted résumés from any job description. - Relaunched on a clean-architecture PostgreSQL backend with Stripe subscriptions and authenticated, per-user data isolation.	

- Personal Agentic OS** — multi-agent automation platform | *Claude API, Python, RAG, FastAPI* 2026
- Engineered a multi-agent automation system spanning 4 machines: retrieval-augmented knowledge vaults, email-triggered document workflows, scheduled briefings, and an orchestrator/worker model with deterministic, fail-closed publish gates.
 - Combined local and frontier models with vector search and tuned retrieval to compound research, ops, and engineering throughput.
- DealFlow Sandbox** — event-driven microservices | *.NET, RabbitMQ, PostgreSQL, Docker* 2025
- Modeled an equipment-finance pipeline as decoupled **.NET** microservices communicating over **RabbitMQ**/MassTransit, with **Entity Framework Core** and **Docker** Compose.
 - Replaced a 15–20 minute manual party-exposure lookup with a sub-second API returning total exposure, delinquency, and document requirements in one call.
- SKompXcel** — mentorship platform | *Next.js, Python, GCP* 2024 - Present
- Founded and built a mentorship platform where **100+ learners** drill algorithms, system design, and mock interviews, deployed on a serverless **GCP** stack.
- Micrograd Neural-Network Framework** | *Python, Jupyter* 2025
- Implemented a from-scratch automatic-differentiation engine (**Value**, **Neuron**, **Layer**, **MLP**) with backpropagation to ground ML fundamentals.
- Mac Study Buddy** — MEng research-automation project | *Python, RAG, local LLMs* 2026
- Building an agentic research-automation system with a tuned hybrid-retrieval pipeline and a held-out citation-faithfulness metric driving an automated experimentation loop.

TECHNICAL SKILLS

Languages: TypeScript, Python, SQL, C/C++, Java, Swift, JavaScript, Bash

Frameworks & Runtimes: Next.js, React, Node.js, FastAPI, Express, .NET / ASP.NET Core, Prisma, React Native / Expo, PyTorch

Data & Infrastructure: PostgreSQL (Neon), MongoDB, DynamoDB, AWS (Lambda, SES/SNS, S3), GCP, Vercel, Docker, RabbitMQ

AI & Tooling: Claude API / Claude Code, agentic orchestration, RAG & vector search, MCP, Git, GitHub Actions, Vitest, Playwright

Finance: Credit analysis, financial-statement spreading, DSCR & net-investment, lease/loan structuring (FMV, capital, vendor finance), amortization modeling, Power BI
